

Tranex delivers site wide communications for major cheese manufacturer...

Long Clawson Dairy, Melton Mowbray, Leicestershire.

For more than 100 years, Long Clawson Dairy have been producing fine quality cheeses. They have become the largest Stilton maker in the world producing more than 30,000 kgs of product a day.

Employing more than 450 people on an ever-expanding site, reliable voice communication had become nearly impossible. Various solutions were attempted (Wi-Fi, Phone system and Mobile phones). None of these could achieve what they had hoped for.

Tranex were tasked with providing site wide communications over an area of approximately 6500 ft² including below surface transmissions for their dairy. This was achieved with a single antenna site and repeater. Along with Hytera PD6XX handsets (which come with the added benefit of being IP67 rated), the system was complete.

"Tranex gave us a great solution to a problem that wi-fi or phone systems could not overcome."
Site Engineering.
